Common Explanation (1-5):

There are three married couples.

Only married couples have children.

B has only one child.

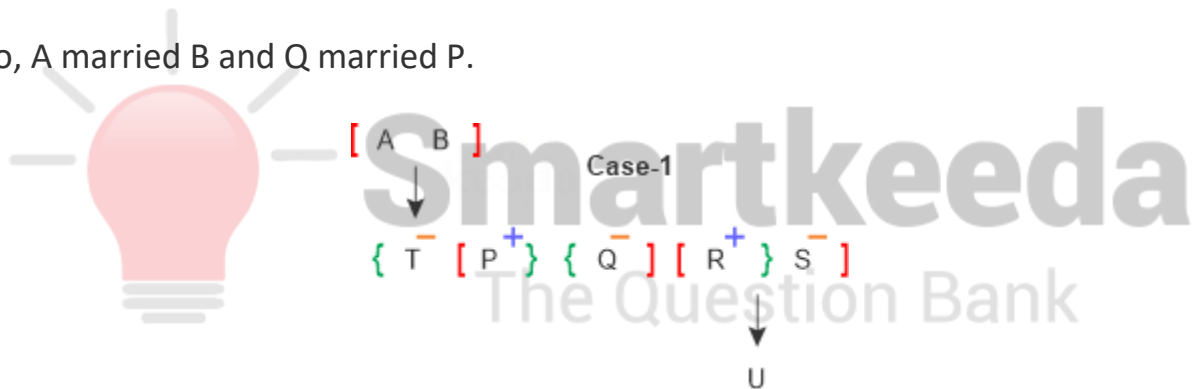

Inference:

R and S is one couple and It can also infer-

In **case 1**, A and Q are married to either B or P.

If A married P and Q married B, then there will be no child of B. So, that case will be invalid.

So, A married B and Q married P.

In this case B would have two children T and P, that does not satisfy 3rd reference. So, **case 1 gets eliminated.**

Now in **Case 2**, A and T are married to either B or P.

If A married P and T married B, then there will be no child of B. So, that case will be invalid.

So, A married B and T married P.

1. From final family tree we see that U could be son or daughter.

Hence, option E is correct.

2. From final family tree M is granddaughter of A.

Hence, option C is correct.

3. From final family tree we see that P is husband of T.

Hence, option B is correct.

4. From final family tree we see that B could either be husband or wife of A.

Hence, option E is correct.

5. A (or B)

P, R

U could be a male.

3 or 4 male members.

Hence, option D is correct.
